REFERENCE LETTER

DPM Solid Polska company was established in 1995. We deal with production of antennas and sale of electric and electronic products. Our product offer includes also audio-video products, flashlights, antenna mounts, lighting, TV mounts, batteries and chargers of Sanyo brand, low-energy light bulbs, miniature light bulbs, etc. Taking great care to providing our customers with highest quality services, we have deployed and constantly streamline the quality management and customer service system.

A wide range of the offered products required implementation of a system which would facilitate verification of product assortment available in stock and enable efficient release of goods from a warehouse. We wanted additionally to implement a mobile solution **cooperating with Comarch ERP XL system** which with the use of remote data collectors would help warehouse workers do their tasks more effectively. Therefore, we decided to deploy **Comarch ERP Mobile Warehouse** solution.

Employees who are responsible for releasing goods from a warehouse make use in their daily work of data collectors to which **warehouse release** orders are retrieved from Comarch ERP XL system. Employees have access to the list of items which are to be released and reading quickly a UPC code allows them to check a specified product. The application allows also for verifying the processing stage of a given warehouse order. When processing warehouse releases, employees have access to information about current stock level of item in a warehouse, which definitely streamlines their work. Using Comarch ERP Mobile Warehouse application during **inventory has significantly accelerated this process.**

The processes within the use of Comarch ERP Mobile Warehouse application that were deployed by a partner company **Graphcom Sp. z o.o.** as well as relevant modifications made (among others, based on the attributes supported in the application) have let us reduce number of mistakes being made when preparing goods to release, whereas the inventory process conducted with the help of Mobile Warehouse has accelerated verification of stock levels.

Overall, we can ascertain that Graphcom Sp. z o.o. company conducted high-level implementation along with the involved deployment team that has lived up to our expectations.

Best regards,
